Cortical Surface Models

The BOLD Signal

Chapter 2 (p. 38-63) of Jezzard et al.

Harrison et al. *Cerebral Cortex* (2002) 12: 255-233

Hemodynamic Response to Single Stimulus

Rapid Event-Related Design

Data Acquisition

1 – 4 seconds per time point

||||| . . .

Stimulus Presentation

Single stimuli, 1 – 4 seconds interstimulus interval

Isn't the hemodynamic response too slow?

It works for EEG/MEG, where the response is short

How can it work for fMRI where the response is long

How Can It Work?

Short Answer: Linear; Time Invariant

Rapid Event-Related Deconvolution, Two Event Types

Stimulus A
Peristimulus Time

Stimulus B
Peristimulus Time

Cortical Surface Models
